**NITROGEN UTILIZATION**

**STRENGTHS**

Exceptional yields throughout central and southern corn belt  
Very good health, stay green and late season plant intactness  
Tremendous test weight and grain quality

**WEAKNESSES**

Average drydown due to late season plant health and kernel density

**MANAGEMENT TIPS**

Semi-Determinate ear style requires higher plant populations  
Split nitrogen applications for maximum yield potential  
Utilize on a wide range of soils

**CORN AFTER CORN TIPS**

Responds favorably to foliar fungicide application in high disease environment

Comments:

- If you need a 114 day Frito....
- If not, I would lean on 6573 or 6579.
- Made the jump from New to Platinum but we will see.
- Disease package is average to good.
- Might be a fit, if needed and have applicable situation.
