6538 requires a high population typically so it did well for 29 standing. Would have liked to have seen it's result at even 31.

6573 doesn't require high population but 28 is really weak. Would have won the plot with 29,500

58.9 20.1 **243.8**

6499 Check Averages:

60.4 20.5 **260.9**

6499 is 112 day hybrid thus it's moisture is along the lines of the plot. Some longer, some shorter.
Test weight on 6499 1.5 higher than plot average.

6573 - Had a customer plant a box of this for 2016 season to take a good look at it. It did what we hoped it would and I will promote this number for 2017 and the price point on this hybrid is very very good. VT3 trait package for above/below for around \$40 less per bag than most triples. Very high yield potential. Plant: perfect, medium height, flex ear, good on Goss's, should not need fungicide. Weakness: not strong on test weight.

6488 - Have a long history with this hybrid in the area. Frito Lay number that is a very nice compliment to 6499. Only available in a VT2 double so needs to follow beans or be planted with insecticide abilities. Thus the price is less than typical. Only real weakness is on sand. Typically yields to within 5-10% of 6499, like I mentioned a very good package to spread out some risk. Strengths: good tolerance to greensnap, high yield potential, good on Goss's, plant: medium plant height, semi-flex ear. Weakness: average rust tolerance, may need fungicide.

6499 - Favorite hybrid in the lineup since 2014, food or not. Strengths: Tremendous yield. Likes all types of dirt. We have used it on dryland. Plant style is great: medium, with a semi-flex medium height ear. Book says harvest early but harvest would be normal for a 112 day. Yield, yield, yield. Weaknesses: need to plant 34,000 to 34,500, can greensnap, (thus 6488 is a good compliment). This is the hybrid that I can say with all honesty to everyone I talk to that there should be at least some of this hybrid somewhere on the farm. Price not high and also not low comparatively.
